SKILLS

DESIGN

Game Design · **Level Design** · Mechanics Design · Puzzle Design · Player Experience · Game Feel · Player Onboarding · Balancing & Economy

3D & VISUAL PRACTICE

Blender · **ZBrush** · Substance 3D Painter · 3D Environment Art · Modular Environments · PBR Materials · Lighting

INTERACTIVE & TECHNICAL

Unity · **C#** · XR Interaction Toolkit · VR/XR · Physics / Ragdolls · Shader Graph

SUPPORTING TOOLS

Adobe Illustrator · UI/UX Wireframes · **Git** / **GitHub** · Firebase

CERTIFICATIONS

Game Development Certification

Government-Sponsored Program

2022 · **Grade A+ · 90%+**

MUHAMMAD ALI

Game Designer & 3D Artist

Interactive Experiences · Level & Mechanics Design · 3D World Building · VR/XR

PROFILE

Formally trained **Game Designer and 3D Artist** with over three years of professional and independent production experience spanning commercial titles and virtual reality (VR/XR). Creative practice focuses on interactive experiences, spatial and mechanics design, puzzle architecture, 3D environment world building, and environmental storytelling. Uses **Unity and C#** as primary prototyping tools to explore, iterate, and realize interactive design concepts through playable experiences.

EDUCATION

B.S. Game Design & Production

Riphah International University · Rawalpindi, Pakistan

Class of 2026

Academic Standing: **CGPA 3.77 / 4.00**

PROFESSIONAL EXPERIENCE

Game Designer & Prototyper

Kurly Brackets · Rawalpindi, Pakistan · On-Site

Early 2023 — Present

- Conceptualized and balanced core gameplay mechanics, level progression curves, and game economies across published commercial mobile games spanning puzzle, arcade, and physics genres.
- Designed player onboarding sequences, contextual tutorials, and responsive UI/UX screen flows to ensure clear visual hierarchy and intuitive player interaction.
- Prototyped interactive mechanics and tuned active physics parameters directly in Unity/C#, including spring-joint dampening and ragdoll hit reactions, from initial design documentation.
- Collaborated on player engagement loops and non-intrusive monetization structures aligned with player experience goals.

Game & Level Designer

Motion Maze · Remote Studio

6 Months

- Formulated gameplay mechanics, pacing structures, and level design documentation for mobile game prototypes within a collaborative remote studio pipeline.
- Created graybox level layouts and wireframed interface systems, working with 3D modelers and developers to test mechanics and spatial readability.

SELECTED CREATIVE & DESIGN PROJECTS

The Forgotten Train: VR Escape

Game Designer & 3D Artist · Unity XR · Meta Quest · PC VR

Atmospheric two-player co-op VR puzzle escape room designed and produced independently. Designed non-linear puzzle hierarchies, spatial level layouts, and physical interaction mechanics (rotational valves, physical keys, and docking sockets) with the XR Interaction Toolkit. Hand-modeled all modular Victorian 3D assets in **Blender** and authored PBR materials in **Substance 3D Painter**, using period-inspired props and lighting composition to convey environmental storytelling without spoken dialogue.

Selah: Bible Charades

Lead Game & UI/UX Designer · Android · [Live on Google Play](#)

Published commercial mobile party game designed around physical motion controls. Designed gesture recognition mechanics using device gyroscope and tilt inputs, structured category card deck pacing, and designed responsive multi-resolution UI with integrated in-game video playback.

2468 Block Puzzle: 2048 Merge

Game & Systems Designer · Android · [Live on Google Play](#)

Published commercial number-merging puzzle game. Designed mathematical merge curves, grid constraints, and board economy. Designed interactive onboarding tutorials, audiovisual cascade feedback ("game feel"), and asynchronous competitive leaderboard systems.

Mr Greedy: Ragdoll Punch

Combat & Mechanics Designer · Android · [Live on Google Play](#)

Published commercial 3D physics combat game. Designed slapstick combat mechanics, calibrated spring-joint active ragdoll impulse curves, and tuned procedural camera hit-stop feedback for tactile impact communication. Designed modular cosmetic unlock systems.
